

MTG PLUS LHD LIP SYSTEM BUCKET PROTECTION FOR UNDERGROUND MINING

Welded lip shroud system for low - profile Underground Mining Load - Haul - Dump Loaders that maximize bucket penetration and machine productivity. Designed and manufactured in Europe, the new range of LHD bucket lip shrouds for mining loaders maximize penetration and offer better bucket protection, ensuring better productivity from low - profile loaders.

MTG LHD LIP SHROUD TABLE - AVAILABLE REFERENCES

| Reference | Description | Lip width (mm-inch) | Blade angle |
|----------------|---------------------------|---------------------|-------------|
| 4MLHD38C1050-7 | Central shroud | 38mm 1.5" | 7.5 |
| 4MLHD38L696-7 | Left intermediate shroud | | |
| 4MLHD38R696-7 | Right intermediate shroud | | |
| 4MLHD38LC189-7 | Left corner shroud | | |
| 4MLHD38RC189-7 | Right corner shroud | | |

MTG PLUS LHD LIP SYSTEM ADVANTAGES OF THE SYSTEM

Streamlined design that optimizes bucket penetration and reliability.

- The new “Ultra Slim” streamlined design has been specifically optimized for LHD loaders, maximizing penetration in underground mines and avoiding the accumulation of materials typical to other wider designs.

LHD Lip System is produced with the new steel alloy.

- Manufactured in Europe, the LHD Lip System is produced with the new steel alloy, MET73W, developed to the strictest quality controls (including AOD process control) to maximize the hardness and protection of the bucket without losing the weldability of steel.

Self - sharpening of the shroud that increases wear life.

- The design of the weldable LHD blade shrouds has been specifically optimized to stay sharp throughout the progressive loss of wear material, maintaining penetration capacity for longer.

With no risk of shroud loss.

- The welded system eliminates shroud loss from the equation, reducing machine downtimes due to GET - related incidents.

Reduction of fuel and tire consumption.

- The “Ultra Slim” shroud design considerably increases bucket penetration, reducing fuel consumption and tire wear.

Paint - free protection system for the weldable area.

- The paint - free finish system in the weldable areas reduces shroud installation time.
